

Moldova Roads Rehabilitation IV**Duration:** 23.12.2014 - 31.12.2023**Countries:**
Moldova**Total budget:** € 250 000 000**Implementer:**
Ministry of Infrastructure and Regional Development,
State Road Administration**Project description:**

The Moldova Road Rehabilitation Project, financed by the European Bank for Reconstruction and Development (EBRD), aims to halt the deterioration of Moldova's road network and ensure key road links are properly maintained to support economic growth and regional integration. Initially launched in 2013 with a €150 million sovereign loan, the project has facilitated the rehabilitation of key road sections across Moldova. In November 2022, an additional €100 million loan was provided to finance further road rehabilitation and cover cost increases under signed works and supervision contracts in line with the price adjustment mechanism. The project contributes to improving regional infrastructure, facilitating trade and transport efficiency, and supporting road sector reforms for more sustainable and well-managed road maintenance systems.

Expected results:

The Project will contribute to transition in the following ways:

1. Expansion of the private sector by supporting the planned privatisation of state-owned road maintenance companies.
2. Continuation of the road maintenance system reform through the development of a strategy for the introduction of performance-based contracting (PBC), including PBC readiness assessment, development of PBC contract templates, as well as capacity building of the state road administration and road maintenance companies.
3. Improvements in road safety regulations.
4. Capacity building and reform agenda focus at the Ministry of Infrastructure and Regional Development.
5. Capture the impacts of the integration of the transport network and the resultant increased economic activity.
